Welcome (Reception)

The first International Congress on Environment and Sustainable Development; The ICESD1’23 is a scientific event for people in the art to represent technological research work in the sense that it contributes to clarifying or proposing answers to the problems taken by the interactions between Sustainable Development sources and the environment. It is an international multidisciplinary conference on the application and use of renewable and sustainable energy. The conference will consist of contributions in the form of oral presentations in technical sessions; introductory communications (papers) by invited speakers; plenary sessions and workshops on current topics. In addition, there will be poster exhibitions.

Purpose:

The ICESD1’23 international congress is a platform for scientific exchange, sharing and development. Conferences and communications will make it possible to present the latest results of scientific research and the exchange of everyone's experiences in the fields of the themes targeted by this congress in order to enlighten participants and everyone about the best practices and new technologies. respecting and preserving the environment.

This congress is a place for meetings, exchanges and debates between academics, researchers and industrialists on the advances and development of research in the field of mineral materials, water, the environment, waste treatment as well as sustainable development. This congress will include plenary conferences, oral communications and posters promoting collaboration and the consolidation of links between participants. The used and spoken languages will be: Arabic, English and French
